PROFESSIONAL SUMMARY

Software Engineer with **6+ years** of experience working on **backend** and **distributed systems**, primarily in **financial services**. Professional background focused on **C#/.NET** applications running on **AWS**, supporting **high-volume transactional workflows** and **asynchronous integrations**. Experience designing and maintaining **microservices** and **event-driven architectures** using services such as **Lambda, SQS, SNS, DynamoDB, Aurora, and S3**. Daily work involves **concurrency handling, message-based processing, idempotency, and consistency** concerns in distributed systems. Familiar with **CI/CD pipelines, production monitoring, and incident troubleshooting**. Additional experience with **frontend development** using **Angular** and **React** in **microfrontend architectures** (Module Federation). Regularly involved in translating **business rules** into **technical solutions** and maintaining systems in **production environments**.

SKILLS

Backend: C# / .NET · REST APIs · Microservices · Event-Driven Architecture · Concurrency & Async Processing

Cloud & DevOps: AWS (Lambda, SQS, SNS, S3, EC2, EKS) · DynamoDB · Aurora · PostgreSQL · CI/CD (Jenkins, Azure Pipelines) · Docker · Monitoring & Logging

Frontend: Angular · React · TypeScript · Module Federation

Practices: DDD · TDD · Git · Bash

WORK EXPERIENCE

Software Engineer — BTG Pactual (Credit IT)

Mar. 2021 – Present

- Designed and maintain a **payment orchestration microservice** for **TED, DOC, PIX, and boleto** transactions, processing **~2M messages/day** using **event-driven architecture (SQS/SNS)**, with **idempotency, retry strategies, and horizontal scalability**.
- Implemented a **BNDES credit modality** end-to-end, including **technical design, business rules, asynchronous approval flows, and accounting integration**, processing **15K+ integrations/day**.
- Designed and implemented a **microfrontend architecture** using **TypeScript** and **Webpack Module Federation** to integrate multiple **Angular and React** applications within a single portal, enabling **deployment independence** and **code reuse**.
- Led the **migration from monolithic services to AWS microservices**, improving scalability and maintainability using **DynamoDB** and **AWS Lambda**, achieving **40% cost optimization**.
- Collaborated with **cross-functional teams** (product managers, designers, and engineers) to deliver solutions aligned with business requirements.
- In the second year, **led a team of 4 developers**, conducting **code reviews**, supporting **production incidents**, and building core features such as the **Book-Entry Invoice** product in Brazil.

Stack: C#, .NET, TDD, DDD, Angular, TypeScript, DynamoDB, AuroraSQL, PostgreSQL, AWS Lambda, Microservices, CI/CD (Jenkins & Azure Pipelines), REST integrations.

Full Stack Developer — Destec (Marketing Fintech)

Jan. 2020 – Mar. 2021

- Developed and maintained **2 CRM platforms** using **Angular** (front-end) and **Spring Boot** (back-end).
- Platforms supported **hundreds of daily active users** and optimized workflows for **marketing and consulting teams**.
- Deployed services on **AWS** using **EC2** and **S3** for hosting and storage.
- Integrated with **Google APIs** and **Meta APIs**.

Stack: Java, Angular, MongoDB, Spring Boot, REST APIs, Google APIs, Meta APIs, AWS EC2, AWS S3, CI/CD, Vue.
